

What is R.E.D. PAC, and why is an out of town PAC supporting a local candidate running for a small town supervisor position? Why should this raise concern?

- R.E.D. PAC (Political Action Committee) is based in Texas, and selects candidates to support based on where major utility-scale wind and solar projects are currently under consideration (or in permitting) throughout the country. R.E.D. PAC is funding mailers and texting ads to local individuals. This is a Texas-based PAC, working for the interests of an out-of-state hedge fund-owned corporation; and is now texting unsubstantiated claims slandering the incumbent. This should be a huge red flag that tells you all you need to know.

Why is this election so important?

- If their candidate wins, they will change the current solar ordinance, and rezone the land so that industrial solar can come into our community on prime farmland.

But won't this provide jobs?

- The solar company states it will create 300 **TEMPORARY** jobs. They admit that there will only be 6 or 7 permanent jobs after the project is complete. They will not commit to only hiring locally for permanent or temporary jobs.

Why should industrial solar on prime farmland concern me?

- Solar energy generated will **NOT BE** used for the local community. Our community will be changed for the next 40 years. Industrial solar can raise your taxes and lower your property value. They are an eyesore and health risk also.

Isn't Solar good for the environment?

The solar company is only after our prime farmland and the panels are only green while it is producing electricity. Pollutants are made to create the panels as well as their disposal in 40 years. Western PA is considered one of the cloudiest locations in the US. The solar company admits the panels are only 20% efficient.

But what about the land rights? The only land rights land owners are concerned about is allowing industrial solar to be placed on their farm land. No other land rights are being restricted. The name "**INDUSTRIAL**" solar says it all. Are we an industrial community? This belongs on land that is zoned for commercial/industrial, not on prime farmland that is zoned agricultural.
